

PRECIOUS OLAYEMI AWOYEMI

Computer Engineer | Cloud Engineering (Entry-Level)

+234 8117157778 | pawoyemi5@gmail.com | [Linkedin](#) | [Github](#)

PROFESSIONAL SUMMARY

Computer Engineer with production infrastructure experience maintaining mission critical systems at Nigeria's Airspace Management Agency, sustaining 99% uptime. Hands-on AWS project work spans VPC design, EC2, S3, and IAM least privilege access, backed by completed AWS Cloud Practitioner Essentials training. Seeking an entry level Cloud Engineering role.

TECHNICAL SKILLS

Cloud & AWS: Amazon VPC, EC2, S3, IAM, Security Groups, Network ACLs, KMS, Secrets Manager, CloudWatch, CloudFront, Lambda, API Gateway, DynamoDB, EKS, Kubernetes, Docker, ECR, CloudFormation, CodeArtifact, CodeBuild, CodeDeploy, AWS CLI/CloudShell, AWS Cloud Practitioner Essentials (completed)

Networking: TCP/IP, LAN/WAN, network configuration, VLAN, VoIP, structured cabling, Cisco fundamentals

Systems & Operating Systems: Linux, Windows Server, preventive maintenance, diagnostics, hardware repair

Programming & Tools: Python, C++, Java, Bash, Maven, Git/GitHub

IT Operations: Help desk (L1/L2), ERP administration, biometric systems, asset management, documentation

PROJECTS

VPC Architecture, Compute & Connectivity | NextWork Guided Cloud Project - 2026

- Designed a custom Amazon VPC with CIDR blocks, public and private subnets, and an Internet Gateway, then deployed public and private EC2 instances with SSH key pairs, tiered Security Groups, and NAT Gateways for high availability.
- Secured traffic with route tables, Security Groups, and a deny-all Network ACL baseline; diagnosed and resolved instance connectivity failures using Security Group, Network ACL, SSH, ping, and curl troubleshooting.

Container Orchestration with Amazon EKS | NextWork Guided Cloud Project - 2026

- Launched an Amazon EKS Kubernetes cluster using eksctl, then containerized a backend application with Docker and pushed it to Amazon ECR as the deployable image source.
- Wrote Kubernetes Deployment and Service manifests and applied them with kubectl to deploy the backend, resolving IAM access-entry and RBAC issues to verify running Pods in the EKS console.

CI/CD Pipeline Development (EC2, Git/GitHub, CodeArtifact, CodeBuild, CodeDeploy) | NextWork Guided DevOps Project - 2026

- Set up a Java web app on EC2 using VS Code Remote-SSH and Maven, then version-controlled it with Git and GitHub, including secure authentication via a personal access token.
- Configured AWS CodeArtifact to manage Maven dependencies through a least-privilege IAM role, then built a CodeBuild pipeline with a buildspec.yml that compiles, packages, and automatically tests the app on every push.
- Deployed the build artifact to a CloudFormation-provisioned production environment using CodeDeploy, then practiced disaster recovery by intentionally breaking a deployment and configuring automatic rollback.

Static Website Hosting & Content Delivery (Amazon S3 & CloudFront) | NextWork Guided Cloud Project - 2026

- Deployed a static website on Amazon S3 with a live public endpoint, diagnosing a 403 Forbidden error through object-level ACLs and implementing a bucket policy preventing file deletion.
- Distributed the site through a CloudFront CDN using Origin Access Control, resolving an Access Denied error via an updated bucket policy, and benchmarking faster global load times against direct S3 hosting.

Serverless APIs & Three-Tier Architecture (Lambda, API Gateway, DynamoDB) | NextWork Guided Cloud Project - 2026

- Built a serverless REST API with API Gateway and AWS Lambda to fetch user data from a DynamoDB table, then hardened access by replacing an overly broad managed policy with a custom inline IAM policy scoped to a single table.

- Assembled a full three-tier web app - S3 and CloudFront for the presentation tier, Lambda and API Gateway for the logic tier, and DynamoDB for the data tier - diagnosing and resolving a stale API URL and a CORS misconfiguration to get the stack talking end-to-end.

Identity, Access & Data Encryption (AWS IAM & KMS) | NextWork Guided Cloud Project - 2026

- Authored a JSON IAM policy restricting a simulated user to development-tagged EC2 resources, with IAM users, groups, and an account alias, validated through the IAM Policy Simulator.
- Created a symmetric customer-managed KMS key to encrypt a DynamoDB table, then tested access control by confirming decrypt permissions were correctly denied and granted for a restricted IAM user.

Secrets Management & Security Monitoring (Secrets Manager, CloudTrail, CloudWatch, SNS) | NextWork Guided Cloud Project - 2026

- Migrated a sample application off hardcoded AWS credentials to Secrets Manager, retrieving them securely at runtime via boto3, and used git rebase to remove an exposed-credentials commit from history.
- Built a CloudTrail-to-CloudWatch-to-SNS pipeline that emails an alert whenever a secret is accessed, diagnosing and resolving a misconfigured alarm statistic that was silently blocking notifications.

IoT Heart Rate Monitoring System | Final Year Design Project; August 2023

- Designed and built a microcontroller based IoT health monitoring device using Arduino and infrared sensors to capture and display real time heart rate readings.
- Managed the project through design, testing, and validation using Arduino C++, PCB design, VHDL, and Git version control.

PROFESSIONAL EXPERIENCE

Computer Engineer / Technical Support, NAMA, Ibadan Airport; June 2025 - June 2026

NYSC Posting, Ibadan, Oyo State

- Maintained live Communications, Navigation and Surveillance (CNS) systems supporting continuous voice and data exchange between pilots and air traffic controllers, sustaining 99% system uptime.
- Diagnosed and resolved complex hardware and system failures under live operational pressure, restoring service within SLA timeframes, and documented maintenance activity to support ICAO and NAMA compliance standards.

Computer & Network Engineering Intern, Yale Foods Ltd; July 2021 - December 2021

Ibadan, Oyo State

- Configured and administered network servers across multiple factory locations, collaborating within a four person team to resolve outages and restore connectivity.
- Deployed hardware and network devices for new installations, administered ERP and biometric systems, and delivered L1/L2 troubleshooting and repair support.

EDUCATION

Bachelor of Science, Computer Engineering.

Obafemi Awolowo University, Ile-Ife, Osun State. Graduated 2024.

CERTIFICATIONS

AWS Cloud Practitioner Essentials (completed training); Cisco Networking Essentials; Foundations of ICT Systems and Networking; NYSC Technical Operations; NSE Graduate Member.
